To Whom it May Concern,

RE – Nanga Bay Caravan Park - Clearing Permit Application

Please find herein information pertaining to a clearing permit application on behalf of the Nanga Bay Caravan Park (the applicant) for a 26,400m^2 area of native vegetation within Lot 4 Nanga Road, Nanga.

Background

Nanga Bay Caravan Park Pty Ltd is proposing to install an upgraded wastewater treatment system within the established Nanga Bay Caravan Park located at Lot 4 Nanga Road, Nanga. The subject site is located within the municipality of the Shire of Shark Bay, approximately 45 km southeast of the Denham townsite and approximately 650 km north of Perth.

The proposal involves the installation of an upgraded wastewater treatment system and upgrades to existing facilities and accommodation options within the caravan park.

Wastewater will be pumped to the wastewater treatment plant into the 5 kL screening tank and passed through the screen to remove any solids before entering the 50 kL holding tank. Solids will be placed in the solids bin and disposed of offsite. The wastewater will then pass through two 50 kL SBR tanks and a 32 kL polishing tank prior to entering the 50 kL irrigation tank. From this tank, the treated wastewater will be pumped to the irrigation area.

The irrigation area will cover an area of approximately 26,400 m^2, with a current maximum elevation ranging from approximately 10 m AHD to 20 m AHD. Rhodes grass will be planted within the irrigation area to assist in the uptake of nutrients from the treated effluent. A fence will be installed around the irrigation area to restrict access to feral herbivores such as goats.

Vegetation within the irrigation area has been mapped as containing vegetation of the Peron and Tamala vegetation associations. Vegetation associations are mapped as retaining greater than 30% of their pre-European extent, denoting that they are well represented.

Whilst no direct clearing of native vegetation is proposed, given the irrigation of treated effluent and cultivation of Rhodes grass may result in impacts to this vegetation, a clearing permit is sought. Further information about the proposal is contained within the attached Works Approval application.

Summary

I trust this information is sufficient for your purposes. Should you have any queries or require further information, please do not hesitate to contact the undersigned.
