Avoidance details	The chosen road design has been refined to avoid and minimise impacts on native vegetation wherever practicable. Design measures implemented include reduced verge widths, safety barriers incorporated into the design, proposed batter slopes to steepen (1 in 3) to reduce batter spread widths, and a reduced median width to minimise carriageway widening. These measures have collectively reduced the overall development footprint and minimised the extent of native vegetation clearing required for the project.
Mitigation details	The City of Rockingham proposes to revegetate all temporarily cleared and disturbed areas following the completion of construction with native species appropriate to the local environment.
